Terence Ng - Project Portfolio

PROJECT: NOVA

Since: Apr 2020

Overview

NOVA is a one-stop desktop application for CS2103T students to manage all CS2103T related activities, be it studying or planning project meetings.

Summary of contributions

I am in charge of creating the commands to view the schedule and also the maintainer of the project's documentation.

- **Major enhancement**:
  - Implemented the view feature of schedule

    A schedule that cannot be viewed is useless. I implemented two levels of viewing (by date or by week) to allow users to have a choice of viewing the schedule at the atomic level, or an overview.

- **Minor enhancement**:
  - Created framework of schedule

    The structure of the schedule determines how we would be coding our features. Thus, having a accurate and robust framework is crucial in helping us visualize our end product.

- **Code contributed**:
- **Other contributions**:
  - Project management:
  - Enhancements to existing features:
  - Documentation:
    - Performed quality check on user guide and developer guide
    - Standardized format of user guide
  - Community:
    - Shared problems faced with others on the forum so people encountering similar problems as me can discuss our solutions
  - Tools:

Contributions to the User Guide

- Overall
  - Ensured team member's contributions were free of errors
  - Integrated team member's contribution to form a cohesive documentation
- Sections
  - 5.3.7. View Schedule of a day
  - 5.3.8. View Schedule of a Week
  - 6. Command Summary

Contributions to the Developer Guide
